

I have Created a Machine Model to Train and test data to easily find out some the person having coronavirus or not. in this mode I have created some row data in CSV format and train the data set and get the person some information like breathing, noisy Nose, age, body temp. then in this filled the data and get the output as % in that person having coronavirus or not

Here is my Github Repo

and Further details about this if it is good then do message or try to connect with me.
